                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 112, Application US/09240274

Sequence 112, Application US/09240274

Patent No. 625245

GENERAL INFORMATION:

APPLICANT: Siegel, Donald L.

TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

FILE REPREBENCE: 09596-4202

CURRENT PILICATION NUMBER: US/09/240,274

CURRENT FILING DATE: 1998-04-10

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER APPLICATION NUMBER: 60/081,380

SALUER PILING DATE: 1998-04-10

NUMBER OF SEQ ID NOS: 224

NUMBER OF SEQ ID NOS: 224

SEQ ID NO 112

LENGTH: 324
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                     182

L11700

V.region; complementarity determining region; immunoglobulin light chain; monoclonal antibody.

Homo sapiens CDNA to mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GAATCCGGGGTCCCTGACCGATTCAGTGGCAGCGGGTCTGGGACAGATTTCACTCTCACC 240

(Organism="Homo sapiens"

(Ab_xref="taxon:8606"

(Clone="InAd8:6278306"

(Clone="InAd8:6278306"

(Clone="Lib="NIH MGC 113"

(Iab host="Hollo (phage-resistant)"

Into Bcorgan: spleen; Vector: pOTB7; Site 1: XhoI; Site 2: EcoR1; CDNA made by oligo-dT priming. Directionally cloned and the Bcorgan; Spleed; Vector: potB7; Site 1: XhoI; Site 2: Into EcoR1/XhoI sites using the following 5' adaptor: Into Bcorgan, Mande by oligo-dT priming. Directionally cloned GGCACACAG(G). Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Superscript II R. Life Technologies). Note: this is a 264 c 219 g 212 t lothers
                                                                                                                                                                lSM Human.

                                                                                                                                                                 Gaps
                          New gene encoding for antibody to Pseudomonas aeruginosa exotoxin plus recombinant vectors and host cells, useful for treating infections.
                                                                               Sequence encodes variable region of light chain of anti-exotoxin antibody. It encodes the same protein sequence as AAN80498 except that the signal sequence of AAN80498 contains an intron. See also AAN80495-N80496, AAN80498 and AAN80911-2.

                                                                                                                                                                                                                                                                                                                                            Genomic DNA was isolated from the Epstein Barr virus-transformed human cell line FK001, fragmented and a gene library constructed. The library was screened with H or L chain probes and positive clones were identified including lambda gFK1. This clone contained an 11.5kb insert encoding the V and C regions of Kappa chain. Ecost digested vector pSV2neo was end-filled and then blunt-end ligated to a Sall linker to form pSV2neoSall. This plasmid and pSV2neoGFK1 which was itself digested with Sall and ligated together to form pSV2neoGFK1 which was itself digested with Pvul The plasmid pSV2neoGFK1 which was itself digested with Pvul and a mixture of the two was used to transform mouse myeloma cells which then expressed the antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pseudomonas aeruginosa; anti-exotoxin antibody; L chain; V region;
                                                                                                                       New gene encoding for antibody to Pseudomonas aeruginosa exotoxin plus recombinant vectors and host cells, useful for treating infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Encodes V. region of L chain of anti-P.aeruginosa exotoxin Ab #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Lymphocytes were sepd. from regional lymph nodes of a patient who had undergone mastectomy for breast cancer. The Blymphocyte fraction was incubated for 20 hrs with Epstein-Barr virus, then cloned by limiting dilution and tested for immunoadherence. Clones producing antibodies reactive with the UCLA-SO-M12 melanoma cell line were recloned 7 times in serum-free medium contg. growth factors. The resulting L612 is a B-lymphoblastoid cell line transformed by the Epstein-Barr virus. It is deposited at the ATCC under CRL 10724. Humab L612 binds to renal cell carcinomas. The DNA sequence of the variable regions for both the light and heavy chains of the L612 antibody were determined by PCR and are given in AAQ71717
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New transformed human B lymphoblastoid cell line - producing monoclonal antibody reactive with GM3 and GM4 ganglioside(s), for treating tumours, esp. melanoma

The invention provides a neuromodulatory agent (I) capable of promoting neurite outgrowth, regeneration, remyelination and neuroprotection in neurite outgrowth, regeneration, remyelination and neuroprotection in promoting cellular proliferation of glial cells, and promoting Ca2+ signaling with oligodendrocytes. An humanised antibody to (I) can be selected from antibody sHGM22 (LMX 22), ebHigM MSI19D10, ebv HIGM CB2bG8, AKGR4, CB21E12, CB21E7 or NSI19E5. (I) is useful for stimulating remyelination of CNS axons, stimulating proliferation of glial cells in CNS axons, or treating demyelinating disease of CNS of such therapy. (I) is capable of binding to structures and cells within CNS axons, or treating demyelinating disease of CNS of a mouse infected with Strain DA of Theiler's murine encephalomyelitis (TMEV) or for treating a human being having multiple sclerosis, or a chuman or domeeric animal with a viral demyelinating disease of CNS (TMEV). (TMEV) (N) is also useful for an in viron method of stimulating the proliferation of glial cells from mixed cell culture.

                              antibodies are useful for preventing infection by a bacterium, virus or like pathogen that causes demyelination or other neurodegenerative condition in a subject. Methods where (I) is administered to a patient are useful for treating multiple sclerosis, Parkinson's disease, Alzheimer's disease, amyotrophic lateral sclerosis (ALS), a viral demyelinating disease, CNS diseases, and other conditions in the CNS

called human colon cancer antigens, given in AABS2234 to AABS4066. The human colon cancer antigens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory of antibacterial, gastrointestinal, vulnerary, nephrotropic, antihifective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polymucleotides, corporation and antibacies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polymucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent disorders, reproductive disorders, immune system disorders, muscular disorders, reproductive disorders, immune clastical disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders, AACS9772 and AACS9772 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ATCAGCAGCCTGCAGGCTGAAGATGTGGCAGTTTATTACTGTCAGCAATATTATAGTACT 300
                                                                                                                                                                                                                              The invention relates to producing gene libraries, comprising immunoglobulin light and heavy variable region. The method involves selecting light chain that binds with the heavy chain product to produce a functional conformation, producing a gene library comprising a collection of these light chain variable genes, and combining with gene library of heavy chain variable genes. The method is used for production of gene and antibody libraries.
                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                            9
